PYTHON PROJECTS

Salon Queueing and Sales Tracking System
🔗 https://dduran19.github.io/MolleyBolley/

Features an intuitive minimalist UI backed with SQL database under the hood.

- Increased overall productivity by 50% due to automation of service records.
- Boosted customer experience as they now can see who will be serviced next, reduced FAQs on the receiving admission by 2 out of 5 customers.

Carbon Footprint Manager
🔗 https://dduran19.github.io/CARBONFOOTPRINTMANAGER/

A comprehensive Carbon Footprint Manager, which involved designing an intuitive interface, integrating data analysis capabilities, implementing personalized user logins, and expanding tracking categories.

- 9 out of 10 users liked the simplicity of the UI.
- 7 out of 10 users rose their environmental awareness by using the app.

Student Database
🔗 https://github.com/DDuran19/CRUD_student_database/

A Relational Database Management System (RDBMS) powered by SQLite3. Made with customtkinter library, this student database management system boasts a user-friendly Graphical User Interface (GUI).

- Can serve over a million of items saved in the database without the need of an internet connection

Simple Chatbot AI
🔗 https://github.com/DDuran19/CarbonFootprintChatBotAssistant/

An intelligent chatbot powered by a .json database, featuring a sleek tkinter-based graphical user interface (GUI), and equipped with pyttsx3 for text-to-speech capabilities.

- Proven to be light-weight (storage-wise) and can work offline
